CE THINK TANK FOCUS AREAS

The CE THINK TANK is working on the following focus areas to foster innovation in integrated healthcare system solutions on long term.

1 BIG DATA & DIGITAL HEALTH TRENDS

Population-wide, big data monitoring and analysis is a core element of the advancement of integrated digital healthcare. This thematic area is about the challenges and opportunities that exist with population-wide big data analytics for assessing health trends, or monitoring health-related subject matter, such as environmental health parameters or epidemiology.

2 CONNECTED HEALTH & NETWORK BUILDING

Tools that improve connectivity between healthcare actors; it can be open innovation platforms/systems to gamification that further engages 'less-easily' accessible actors from the health-value chain.

3 DIGITAL ASSISTANCE IN HEALTHCARE DELIVERY

Healthcare delivery is becoming more revolutionised each day with the inclusion and integration of digital assistance systems and digital assistants to support the provision of care in many forms (from chronic and long-term care, to acute and curative care).

4 DIGITALISATION FOR HEALTHCARE MANAGEMENT

Healthcare management is pervasive across all sections of the healthcare value-chain (and occurs in all healthcare institutions). This topic refers to the organisational design and functionality of the institutions which manage healthcare development & delivery.

5 DIGITALISATION FOR HEALTH PROMOTION & PREVENTION

Engagement with quantified self apps and wearable technologies, to improved knowledge dissemination and public participation in digital health innovations/ policy development. Also all activities to improve health or to prevent illnesses by using new technologies, social media or digital innovations.

6 TECHNICAL & ORGANISATIONAL INFRASTRUCTURE FOR INTEGRATED HEALTHCARE

Integrated digital healthcare systems solutions and case studies would not be able to exist without the appropriate technical or organisational infrastructure (physical structures) to enable the dissemination of digital healthcare solutions and applications.

7 DATA SECURITY & COMPLIANCE IN HEALTHCARE

The provision of integrated digital healthcare comes with questions and interest about data security, doctor-patient compliance, and generally about digital standards in the transmission/observation/use and extrapolation of digital health data. This focus is horizontal.

CE THINK TANK

The CE THINK TANK will assure the results and usage for outputs from digitalLIFE4CE on long term to deliver a benefit for the actors of the quadruple helix in Central Europe.

GET A PART OF THE DIGITALLIFE4CE COMMUNITY AND CONTACTS TO KEYPLAYERS AND AVAILABLE HEALTH CARE SOLUTIONS

Extend the networks, get connected to keyplayers and foster cooperation in our Region.

Join our community and get the possibility to benefit from the digitalLIFE4CE network which connects more than 270 health care actors. Get access to the best practice catalogue which includes 34 available health care solutions and 22 best practice cases.

GET ACCESS TO NEW KNOWLEDGE & RESEARCH RESULTS

Community shares the new Knowledge and Research results with the think tank network

Join our think tank community and get access to state-of-the-art knowledge and see the innovative results of the reasearch in field of digital Health.

GET THE OPPORTUNITY TO RE-USE OF DIGITALLIFE4CE OUTCOMES

Members of the Task Force Community will get the opportunity to use the tools.

Join the digitalLIFE4CE community and benefit from knowledge Transfer for enabling a mutual understanding on digital Health. Join the community to transfer technology into other markets and add value for your region.

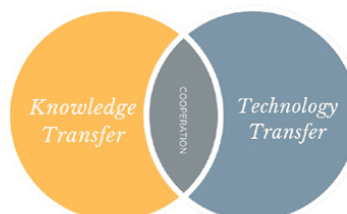

LONG LASTING ADDED VALUE

Transferring and anchoring.

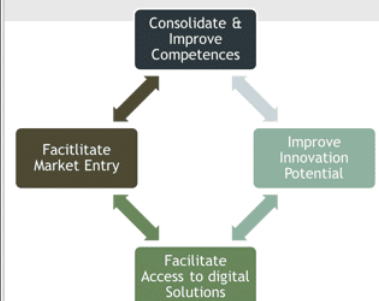

The digitalLIFE4CE community makes results and outcomes available to stakeholders, policy makers and synergistic projects.

The aim of the community is to improve digital health care services and solutions in and outside of Central Europe!
