

Making public data more accessible

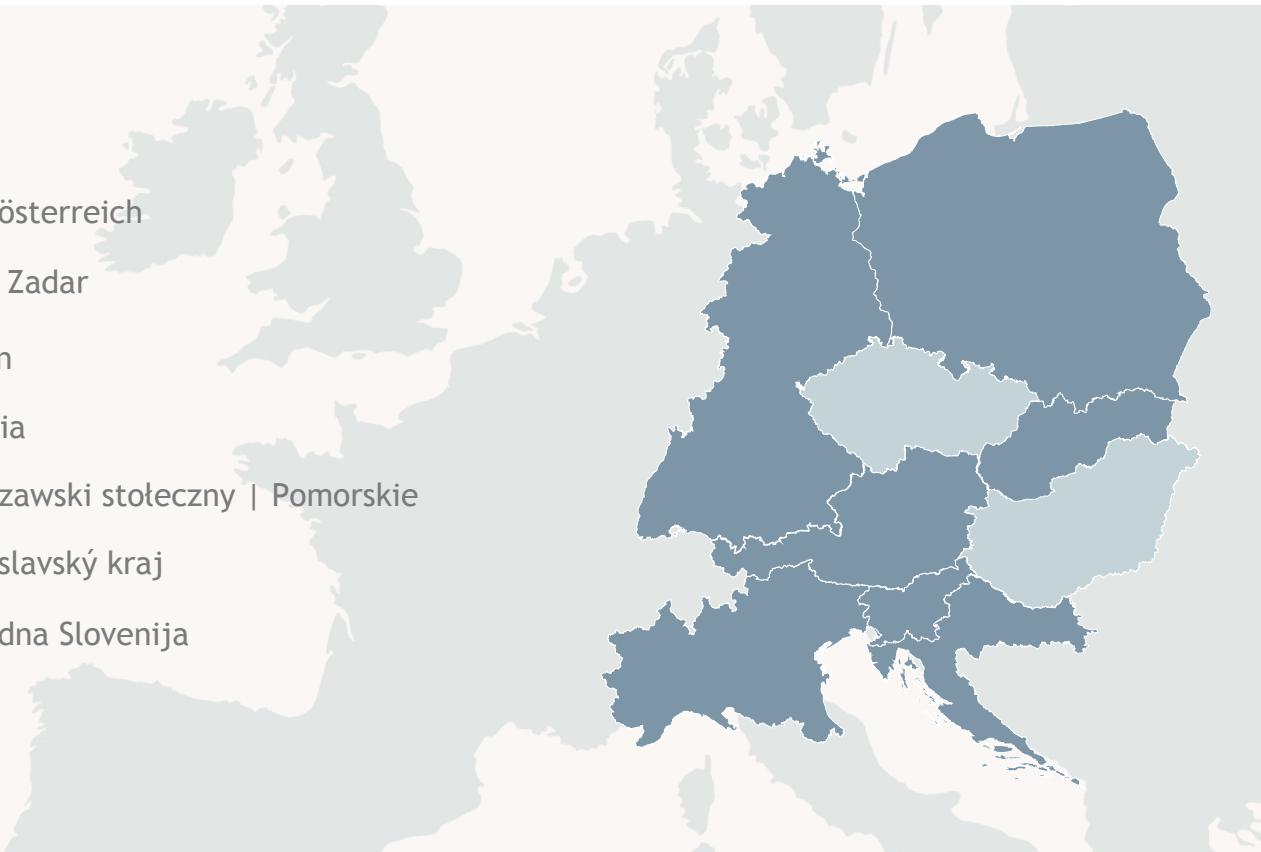

All over central Europe, public and private institutions gather data that should be openly available. However, these public open data are often not easily accessible and real-time updates are missing. The DoorCE project changes this by establishing local open data hubs. In these, the partners help institutions to offer high-quality, dynamic data that are accessible to all citizens through innovative digital services. The partners support innovators, smaller companies and public authorities to utilise and share data more efficiently through newly developed, user-friendly tools for data digitalisation and management.
