

# Transforming industrial regions with a focus on soft skills

Industrial regions in central Europe are amidst a heavy transformation of their economic and social base. It is especially the non-metropolitan regions who must change profoundly in response to global economic trends, political demands, and structural disadvantages. The X-Inno Radar project increases their agility and innovativeness by strengthening soft skills. The partners jointly apply a new place-based approach, which centers around transversal skills, maker skills, and pioneer skills. After regional screenings and a conceptualisation phase, they pilot novel approaches for strengthening and expanding soft skills capacities. Key findings are then transferred to relevant stakeholders throughout Europe.
