

Providing better information and services for cross-border travellers

Cross-border connectivity is crucial for people in peripheral areas. But they often lack efficient service and information on public transport links to regions across borders. The TRANS-BORDERS+ project targets this issue by introducing new services and digital information systems that help with planning public transport journeys in border regions. Project partners from five countries develop solutions like open journey planners that link travel information from different providers across national borders. Moreover, the partners digitalise rural transport stops to turn them into modern mobility hubs and pilot new cross-border mobility services.
