

About the project

PRO.active CARE F.or U.sers L.ife

Elderly and vulnerable people wish to be taken care of in their homes. But technical solutions to support independent living of people in need of care are often missing, especially in rural regions. The PROCAREFUL project wants to improve the situation by developing a new model for hybrid homecare services. The partners work on a solution that combines face-to-face care with remote and digital support based on machine learning and artificial intelligence. The deployment of the model is tested in five regions.

This project is supported by the **Interreg Central Europe Programme** with co-financing from the European Regional Development Fund.

Project duration: 03.2023 – 02.2026

Project Budget 2,29m €
80% of the Budget is funded by ERDF

Target audience of the project: adults (+55 years old) and older people, caregivers/ carers, professionals, relevant stakeholders.

Project status up to date

Over the past few months, we collaborated with the project partners to gather data on **tele-health, tele-care and hybrid solutions for long-term care provision in home environment.**

Drawing from the identified findings, we will develop **meta-analysis and experts ranking reports**, as well as **a hybrid homecare model** that combines both technology and human interaction components.

We anticipate sharing the results soon.

Meta-Analysis

Meta-analysis on e-care, m-health solutions, benchmark projects and literature findings

COMING SOON

Experts ranking

Analysis report that presents experts' ranking evaluation about the e-care, m-health home care

COMING SOON

Upcoming events

OUR SPEAKERS

Oscar ZANUTTO
ISRAA Italy, Project Coordinator

ABOUT WEBINAR

There is a need **to innovate the home care delivery** trying to reach out a broad number of citizens and giving them a support for the healthy ageing. At the same time care provider organisations need solutions, models and technological tools that could expand their potential also addressing the improved shrinking of the care workforce in the Interreg Central Europe area.

PROCAREFUL Project is working on that challenges trying **to scale up the organisational models using technology for the cognitive and physical decline prevention.**

The webinar will present the best practices coming from mHealth and eHealth experiences to build upon.

WHO IS INVITED?

Policy makers, health and social care managers, practitioners working on adult and older care domains.

Join us to give your contributions and feedbacks !

Join us for our local events!

In each partner's country, national seminars are organized to present the best practices coming from mHealth and eHealth experiences.
