

Helping regions to speed up the green transition of small companies

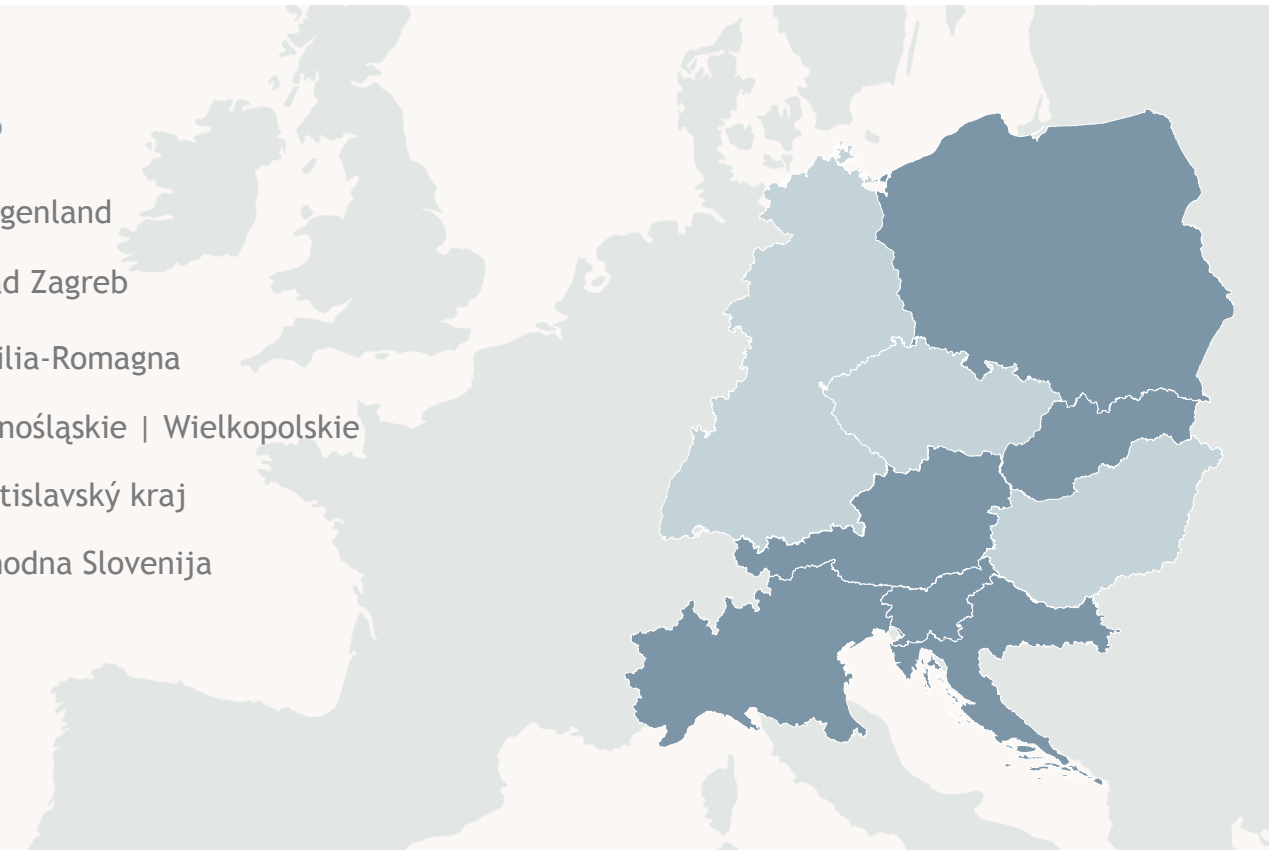

Small and medium enterprises account for nearly a third of carbon emissions. At the same time, many regions are not able to support their decarbonisation. The CREDIT4CE project builds the support capacities of such regions to take forward the green transition. The partners train them on technology transfer and speed up the development and uptake of innovative technologies needed for “net zero”. They design a new framework for green-tech innovators, which consists of a set of interventions for technology transfer and a public/private support model for green tech startups. The model will speed up the transfer of cutting-edge tech from lab to market and scale up green solutions to create new business opportunities.
