## Outputs

### Smart Rehab strategy

The strategy will be shaped through a comparative analysis of existing models across partner regions, benchmarked against leading international approaches for advanced rehabilitation solutions. It will also provide policy recommendations aimed at enhancing regional and national frameworks, alongside the development of the Smart-Rehab-INDEX tool. Regional authorities and target groups will play an active role in shaping the strategy, ensuring a quadruple helix approach and delivering high-quality, practical results aligned with stakeholders' needs.

Type of output: **Strategies and action plans**

**In development**

## ABOUT THE PROJECT:

Rehabilitation is care that helps people get back or improve abilities necessary for their daily life.

The challenge is that such care often lies with the family without much systemic or technological support. The RehAllianCE project helps MedTech companies break through and accelerate the commercialisation of their products.

The project partners share experiences and good practices to develop a set of policy recommendations to improve the health care sector's innovation governance. They will test new technologies, such as rehabilitation robots or exoskeletons, assistive devices, wearables or telemetric tools.
