

WORK PACKAGE 1

Building Circular Skills for the Future

As the first work package of the SMART CIRCUIT project, WP1 focused on building the knowledge and skills needed for circular and digital transformation in manufacturing. It established the Circular Innovation Academy as a transnational training and capacity-building platform for professionals, SMEs, and innovation actors.

Through a “learning by doing” approach, WP1 combined training, pilot activities, and real stakeholder feedback to support the adoption of circular economy solutions. By strengthening competencies and fostering collaboration across regions, it laid the foundation for a more connected and future-ready innovation ecosystem in Central Europe.
