

WORK PACKAGE 2

Shaping Circular Industry Strategies

As the second work package of the SMART CIRCUIT project, WP2 focused on strengthening policy dialogue and aligning regional and transnational strategies for circular and digital transformation. It created structured platforms for collaboration between policymakers, industry, and innovation actors through interactive formats such as Town Halls and Strategy Labs.

By facilitating exchange, identifying barriers, and promoting shared solutions, WP2 contributed to the development of a joint strategic framework supporting circular industry in Central Europe. It played a key role in bridging the gap between policy and practice, ensuring that innovation efforts are supported by coordinated and future-oriented strategies.
